

AOR RECORDS ALL OPERATING ACTIONS OF MONITOR AS VIDEO AND MANAGE IT. RCVM, AN CONNECTING PROGRAM, WHICH INTEGRATES WITH AOR TO STRENGTHEN YOUR COMPUTER DATA HAVE MORE PROTECTION THAN EVER

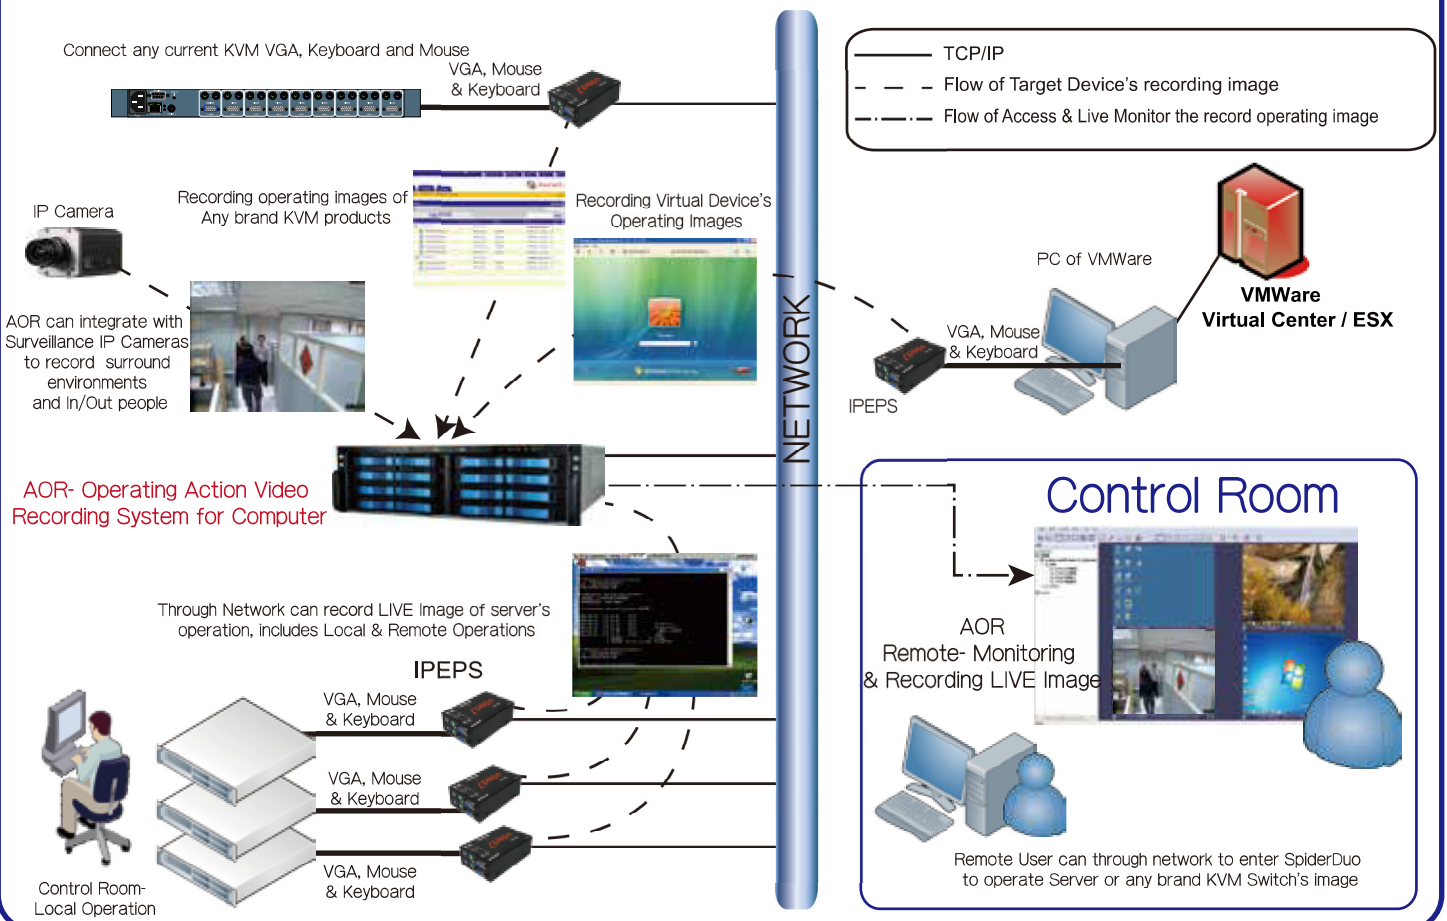

In order to keep the operation of data center smoothly, administrators should let all users login the managed devices that they've been authorized, so they can operate without any hesitation and all resources can be performed in its maximum benefit. On the other side, the biggest headache for administrators is can't record the past images/screenshots of what System Integrators, users and maintenance service providers had done on the equipments.

The BEST & ONLY Solution is through AOR system to record every operating action and turn into video, so all the actions & commands are recorded in detail which can have 100% protection than before. Furthermore, users use ADDER IPEPS device to connect with existing equipment or KVM directly or indirectly, then all the operating actions can be recorded by RCVM program of an independent pc through network. Administrators can playback at anytime to clarify who should be responsible once there is any problem occurred.

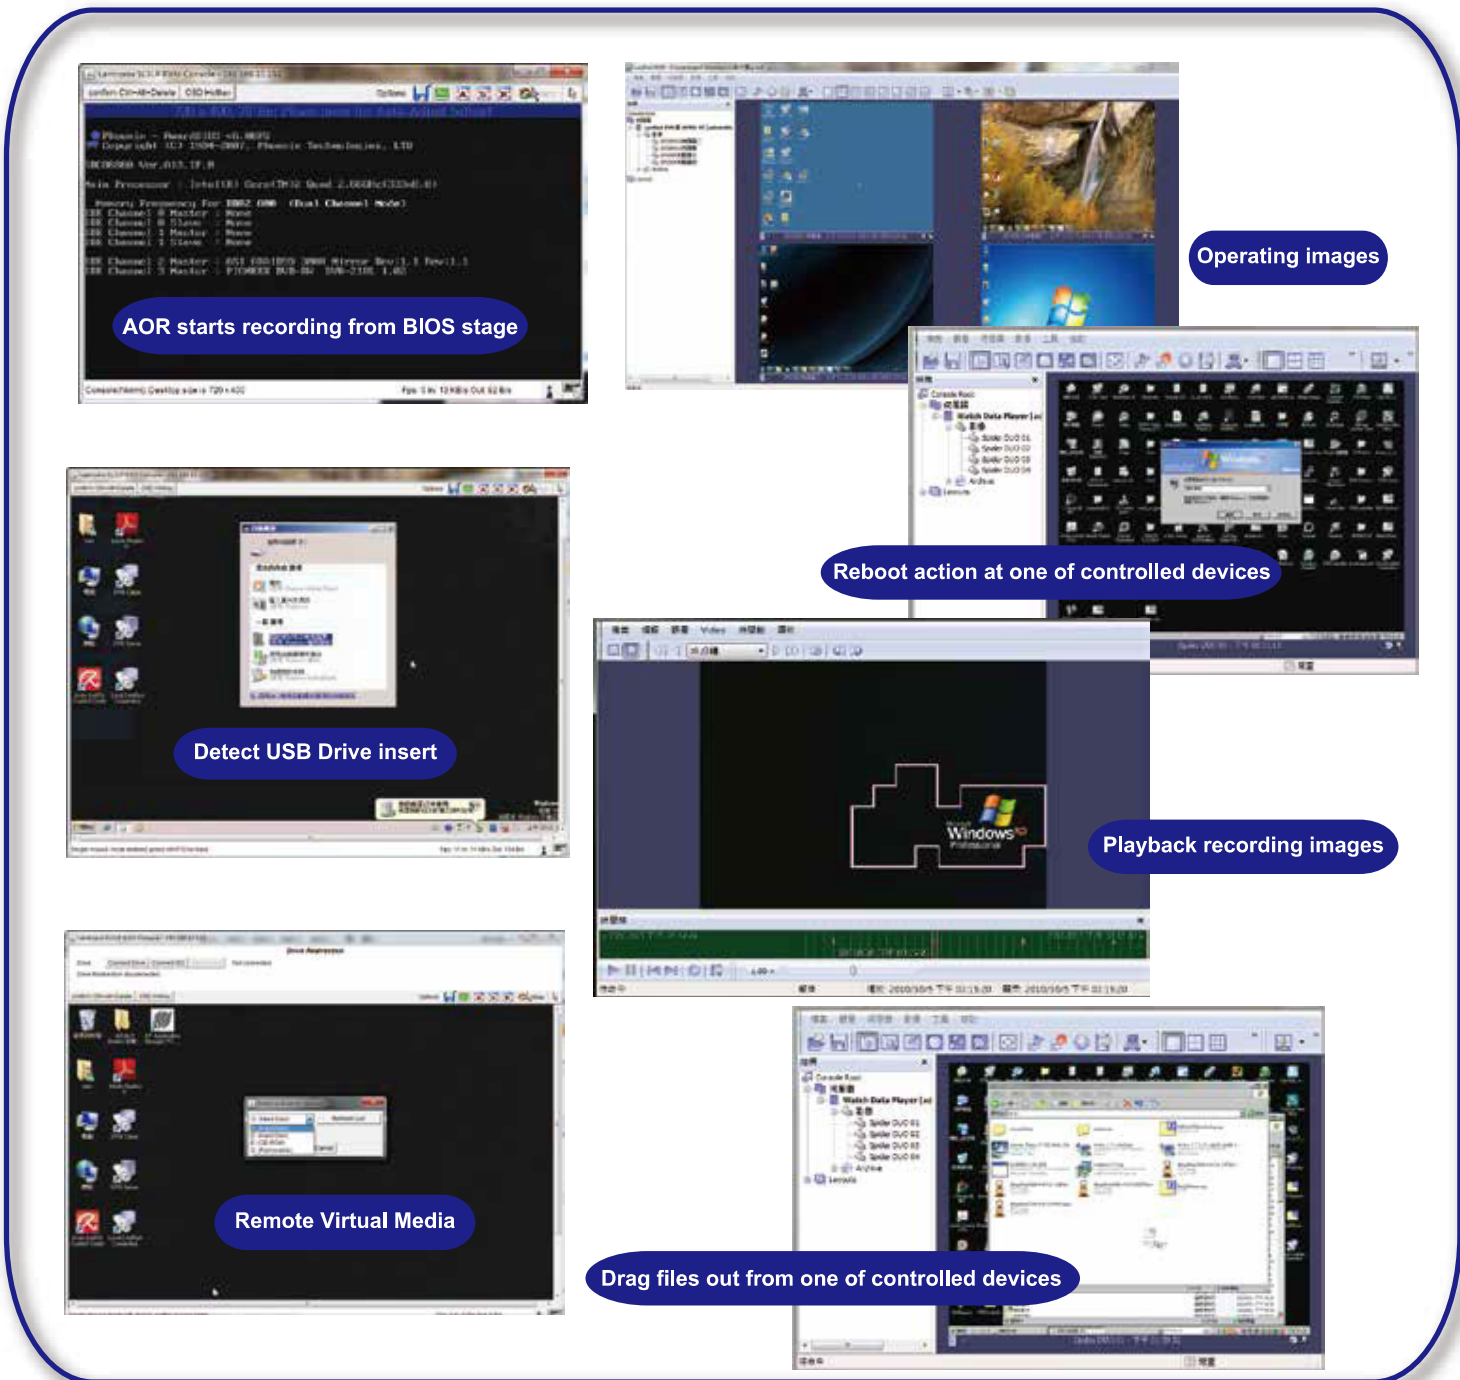

★ *You can get such protection with less money to spend*

Structure of AOR with HIGH RESOLUTION

Images of AOR

AOR (Appliance Operation Record) system needs to connect an external plug-in hardware to fully capture & record all operating actions of monitor. No need to install any software at monitoring equipments to increase its loading and lower the transmission speed (bandwidth).

With a complete master-slave structure, whether local or remote operators can watch operating images at real time or playback modes which will not be affected, nor interfered with each other. By adding more servers on AOR, you can monitor many control rooms at the same time.

AOR system also support smart phone, tablet PC and notebook to let the remote users can monitor on web interface. When there is anything happened, the users can monitor and make decision immediately via network at anytime and anywhere. Administrators can enhance the data security protection by limiting users' authorities. Furthermore, AOR can be used with IP Cameras to reduce controversy and strengthen the management of personnel access at the control rooms.

Supported KVM Switch:

- AdderLink iPEPS AdderLink IP / IP GOLD
- AdderLink INFINITY AdderLink CAT 1000
